

Build Report (Sample)

Report ID: SAMPLE-0001 Generated: February 12, 2026

This report shows how a Stratos build is configured and validated before delivery. It's designed to give you confidence that your system was built with intent — not just assembled.

Good to know

All systems are built with all-new parts and a fresh Windows install. Windows 11 Home is included by default; Windows 11 Pro is an optional upgrade (+\$40).

1) Build intent

Primary use	High-refresh-rate gaming + streaming
Priority	Stability-first with controlled thermals and predictable fan behavior
Target display	1440p (high refresh)
Aesthetic	Clean build, optional accent lighting

2) System summary (example)

CPU	Example: AMD Ryzen 7-class / Intel i7-class (exact model on invoice)
GPU	Example: RTX / Radeon tier matched to budget and resolution target
Memory	32GB DDR5 (16/32/64/128GB depending on tier and workload)
Storage	1TB NVMe (OS) + optional secondary drive (1–4TB)
Cooling	Air cooling standard; AIO upgrade available (tier-dependent)
Power supply	Auto-sized for headroom (stable under load)
OS	Windows 11 Home (fresh install) — Pro optional (+\$40)

3) Validation & QC (example)

- BIOS/UEFI verified and stability settings configured (safe defaults).
- Memory profile enabled (EXPO/XMP when supported) and validated.
- CPU + GPU combined load validation performed (sustained).
- Thermal behavior checked (no throttling; fan curves tuned).
- Storage health checked; OS installed and updated; drivers installed (no bloat).
- Network, Bluetooth, front I/O, and USB ports verified.
- Cable management inspected; airflow paths confirmed.

Quoted add-ons

Custom water-cooled loops (Elite/Flagship) are quoted separately based on tubing, theme, and performance goals.

4) Configuration notes (example)

- Fan curves tuned for smooth ramps (avoids sudden spikes).
- Power limits set for stable behavior unless otherwise requested.
- Lighting (if selected) set to a clean, low-intensity profile.
- Driver baseline installed: chipset + GPU drivers; no trialware.

5) Packaging & delivery QC (example)

- Internal inspection completed; GPU support used when needed.
- System packed to minimize transit movement; accessories included.
- External box labeled and sealed; tracking provided after shipment.

6) If you need support

If anything looks off after delivery, contact Stratos Support with your report ID and a brief description of the issue. Photos or a short video help us troubleshoot faster.

Support checklist

Include: report ID, symptoms, when it happens, and any error messages. We'll respond with next steps and troubleshooting guidance.
